Allowable Subject Matter

1. Claims 1, 2, 4-6, 8-11, 13-19, 21-24, 26-28, and 30-33 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter: The prior art does not disclose a filter on the signal indicative of input device torque, a condition processing block to determine straight travel, and an enable switch for receiving a binary control signal from said enable block combined with a signal indicative of a valid detection cycle where a valid detection cycle is defined as a time duration relative to ignition; determining whether at least one of the duration of the monitored ignition signal exceeds a threshold duration and the distance traveled by the vehicle exceeds a threshold distance. The prior art discloses hydraulic steering systems that correct based steering pull based on the input torque; electric steering systems that correct based on the lateral dynamics of the vehicle, such as yaw rate. None of the prior art systems compensate for steering pull by using a filter, enable block or condition processing block for determining straight travel along with a signal indicative of a valid detection cycle; or by determining an ignition has been turned on for a specified period of time or the vehicle has been driven a specified distance.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian J. Broadhead whose telephone number is 571-272-6957. The examiner can normally be reached on Monday through Thursday.
